## SOME GOSSIP OF FASHIONABLE DOINGS IN THE EAST.

## A Preacher's Fondness for Red—The Carafe is No Longer An Ait.

A Philadelphia paper tells of a most interesting contest which is being waged among the unmarried women of an uptown congregation in that city. They are, it is said, literally "painting the town red." The pastor is also unmarried, and in a recent discourse he incidentally mentioned that he considered red a beautiful color. The next Sunday the church was a mass of red. Every woman, young and old, who was not encumbered with a husband, wore the pastor's favorite color. There were red waists without number; some maidens of doubtful age wore red skirts, while red ribbons and red millinery were everywhere. Bicycle dresses followed in a short time, and the married members of the church are wondering where the mania will end. In the meantime the unfortunate clergyman is getting considerable quiet amusement out of the affair.

This item of dining room lore is gleaned from the society columns of the New York Commercial Advertiser: "The carafe is no longer used in the table service in fashionable circles. Cold water without ice in the tumbler or goblet is preferred. This is not possible when the carafe is used unless one has a refrigerating plant that will freeze water in the carafe, so the glass tankard with silver mountings has been introduced. This tankard is a handsome table ornament, as well as a serviceable water vessel. It is shaped like the carafe and has a handle, having a silver lid and handle, so constructed that when lifted the handle the lid rises automatically just high enough to allow a stream of water to be poured into the tumbler, but not high enough for the ice to slip out. When the tankard is set back on the table the glass is filled with the clear and sparkling water from the melting contact with the air. Each tankard has a little silver saucer in which it stands."

"At some London teas," says a woman who has recently returned from that place, "there came on the New Year's day, with the little possible when the carafe is used unless one has a refrigerating plant that will freeze water in the carafe, so the glass tankard with silver mountings has been introduced. This tankard is a handsome table ornament, as well as a serviceable water vessel. It is shaped like the carafe and has a handle, having a silver lid and handle, so constructed that when lifted the handle the lid rises automatically just high enough to allow a stream of water to be poured into the tumbler, but not high enough for the ice to slip out. When the tankard is set back on the table the glass is filled with the clear and sparkling water from the melting contact with the air. Each tankard has a little silver saucer in which it stands."

The curious line of social distinction drawn by certain snobbish people is illustrated in the following story from an Eastern paper: "The young woman who went to town frequently and came back late for dinner, looking tired, and with a cold, was said to 'write pieces for newspapers.' The young woman who had known her in town and never suspected her of being a 'writer' of pieces, said, 'I am quite sure she doesn't.' 'No, I don't suppose she would,' admitted the champion of the woman who went to town frequently. 'But I think it is she who writes, I am quite sure, that she doesn't get paid for it.' 'And thus the status of the Pine-tree Hotel was saved.'"

In this part of the country few people are taking much thought about the automobile, but, according to the New York Sun, the knowable women in society are wondering what they will say when they want their friends to go out in these machines with them. "Will you go out with me this afternoon at 5 o'clock?" is entirely too much of a mouthful. Brains are being put to work to discover or find another way of expressing one's self. A woman said the other day: "I can't say, 'Will you go out with me?' nor can I say, 'Will you go out with me?' I think I shall start the fashion of saying, 'Will you take a spin with me?'" The French women, who are now wild about automobiles, call their machines "chauffeurs," which is a translation of the English word "scorcher," which they applied to their bicycles when they were so popular. Some of the women who have gone into automobile and all its delights are Mrs. William K. Vanderbilt, Jr., Mrs. Arthur Kemp, Mrs. John R. Drexel, Mrs. Harry Payne Whitney, Mrs. J. F. D. Lanier and Mrs. John Jacob Astor.

## A COOL PROPOSITION

And a Sure One.

The Body Does Not Feel Heat Unpleasantly if Proper Food is Used.

GRAPE-NUTS Supply It

KEEP COOL FROM PROPER HOT WEATHER FOOD.

People can live in a temperature which feels from ten to twenty degrees cooler than their neighbors enjoy by regulating the breakfast. This is a proceeding to which people who care for physical comfort in hot weather are giving careful attention. The plan is to avoid meat entirely for breakfast, use a goodly allowance of fruit, either cooked or raw. Then follow with a saucer containing about four heaping teaspoons of Grape-Nuts, treated with a little rich cream. Add to this about two slices of entire wheat bread, with a meager amount of butter, and to this a cup of Postum Food Coffee.

If one prefers, the Grape-Nuts can be turned into the cup of Food Coffee, giving a delightful combination. By this selection of food the bodily energy is preserved, while the hot, carbonaceous foods have been left out. The result is a very marked difference in the temperature of the body, and to this comfortable condition is added the certainty of easy and perfect digestion, for the food is readily worked up by the digestive machinery. Experience and experiment in food and its application to the human body has brought out these facts. They can be made use of and added materially to the comfort of the user.

## A BLUE DIAMOND.

English Court Will Not Permit Its Owner to See It.

London Mail.

Lord Francis Hope, brother of the present Duke of Newcastle, and husband of the well-known actress Miss May Yoh, applied to Mr. Justice Byrne in the Court of Chancery yesterday for permission to sell the celebrated Hope blue diamond, which is one of the family heirlooms.

This jewel, which is set as a brooch, amid a circle of white diamonds, is an acknowledged to be unique from its size, weighing 44 carats, and was the only blue diamond known in the world until the late Mrs. Hope, who was settled as a widow in London, discovered it among her valuable jewels, and the famous Hope collection of pictures, at the family mansion in Deep Dene, in Sussex.

In the splendid Hope estates in England and Ireland and the jewels and pictures Lord Francis Hope has been unable to sell, but through extravagance he has not been able to reside at Deep Dene, and he became a bankrupt four years ago, when his life interest was sold for £150,000 to meet his debts and enable him to get his discharge from bankruptcy.

Last year Lord Francis obtained permission from the Court of Chancery to sell the collection of pictures. They produced £121,000, but when the various claims were settled nothing remained of that sum for Lord Francis.

Now he seeks permission to dispose of the renowned blue diamond. His counsel, Mr. Farwell, Q. C., urged as a reason for the sale now that other blue diamonds might be discovered, which would reduce the value of the Hope jewel. Experts, however, are of opinion that there are various sums between £15,000 and £25,000.

Having regard to the peculiar position of the applicant, who has only thirty-three years and had no children, the sale of this diamond was a prudent course to pursue. Mr. Justice Byrne was prepared to refuse, but the diamond was not of great beauty; it was simply curious, and it was not everybody who could afford to keep it. It was worth many thousands of pounds locked up in Lord Francis's hands.

Every member of the family appeared by counsel opposing the sale. They have claims against the settlement, and the order of succession, after Lord Francis's death, is in favor of his daughter, Lady Beatrice Lister Kaye, with remainder to her son, Lord Francis, and then Lady Florence Pelham-Clinton, who is a spinster, and the ultimate remainder to the Duke of Newcastle.

His Lordship, in giving judgment, dwelt on the fact that the diamond was not sold, and, further, there was nothing to show that if the jewel were sold, Lord Francis would be able to pay his debts, but through extravagance he has not been able to reside at Deep Dene, and he became a bankrupt four years ago, when his life interest was sold for £150,000 to meet his debts and enable him to get his discharge from bankruptcy.

Therefore he refused to sanction the sale of the diamond, which was one of the estates of all parties to come out of the estate.

## AMONG THE BEST OF DIVERS.

Women Who Make a Business of Diving for the Pearl Oyster.

New York Sun.

A Brooklyn man received last week a letter from a friend in Seoul, the capital of Korea, describing a visit the writer had recently paid to the large island of Quelpaert, just south of Korea and a part of that country. It appears that one of the main lines of business is diving for the pearl oyster and that the diving operations are wholly monopolized by women. Here is an extract from the letter:

"I think the most unique sight I ever saw was the women divers at Quelpaert. Perhaps you will have heard of the pearl divers engaged in the pearl oyster fishery. They will spend several weeks in travel before going to Dresden to locate for the winter.

turning with the fruits of their quest under the sea. They are very expert divers, and they have fine, supple figures, and can swim as well as any fish of the sea. Each woman carries a small basket on her back, and they are very expert in the use of their hands and feet to keep the water out. Tied to the gourd is a little bag. The third and last article of the equipment is a stick, which is also fastened to the waist and rests on the back of the diver. The women get out to the fishing grounds.

You might think that boats would be kept to carry these women to their work, but no, they work their passage and it is a lesson in the art of swimming to see them. They are almost invisible in the water, the waves moving seaward with long, quick strokes, and cutting the water like a racing shell. They swim out about half a mile and then they begin to work. My favorite amusement was watching as much as could be seen of the subsequent operations of a sunflower. Photographs of which were taken by the writer. The women were taken every minute from sunrise to sunset of a day.

One of the most interesting of the photographs made up to date with this novel apparatus represents an apple tree, which is seen in a few twinkles to display its new foliage, put forth buds and blossoms, and ripen its fruit. Equally notable is a picture of a sunflower, snapshots of which were taken every minute from sunrise to sunset of a day.
